Selekcia vedeckej literatúry do WOS

Slovenské časopisy vo Web of Science Core Collection

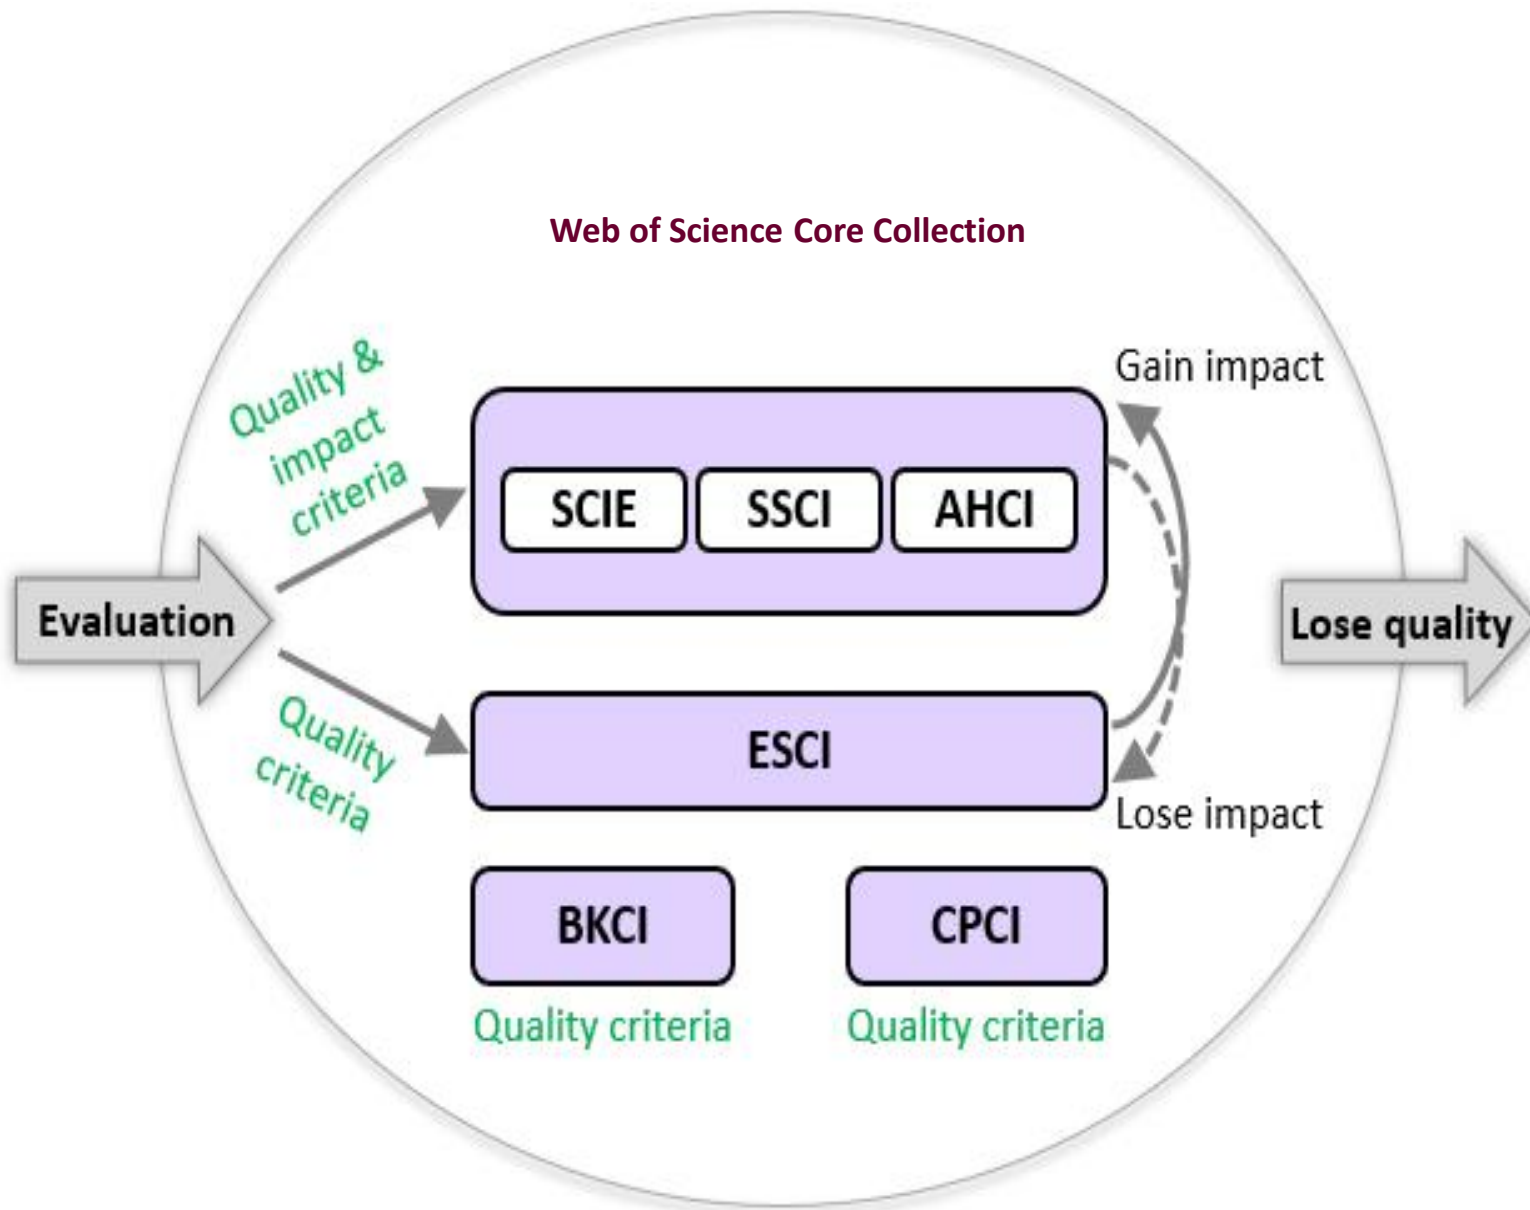

Web of Science základné indexy: 26

WOS CC Emerging Sources Citation Index: 27 (6 akceptovaných v roku 2018)

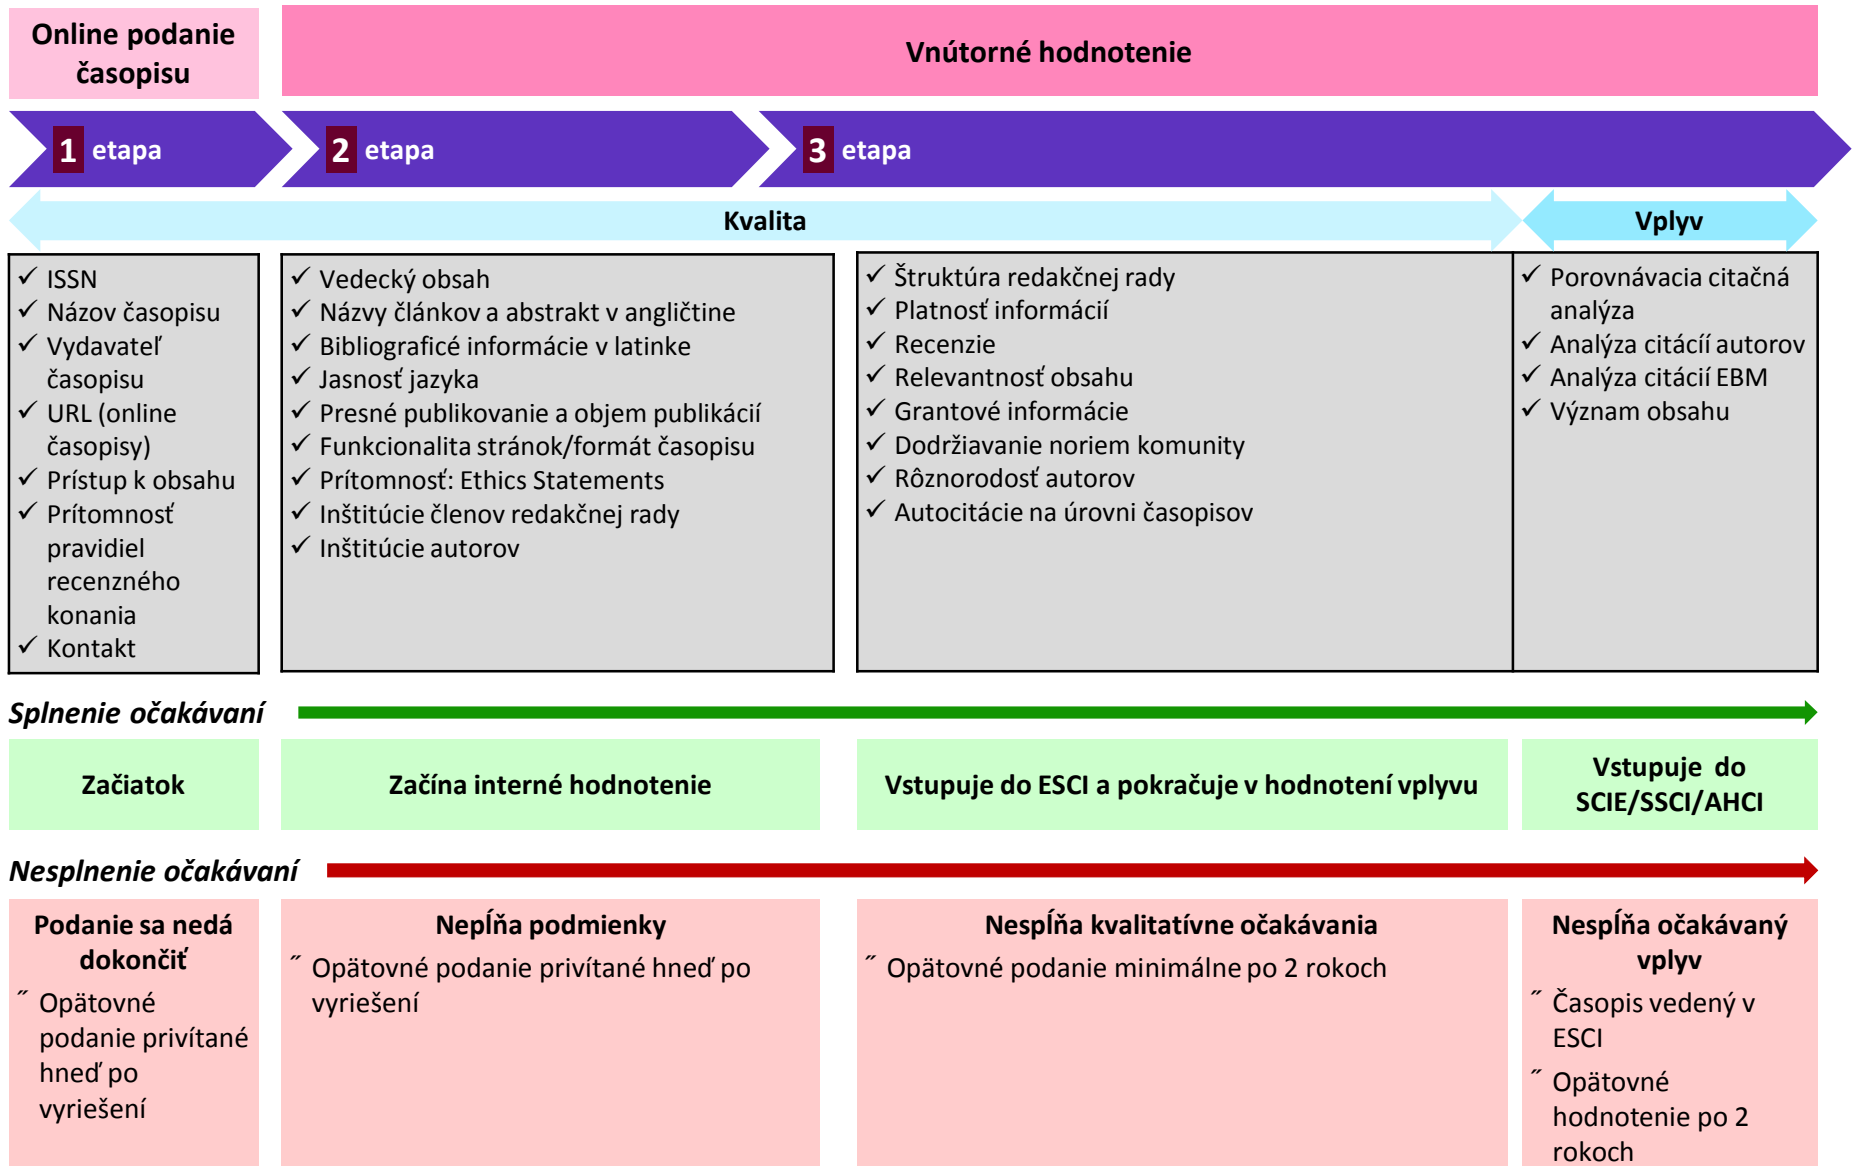

Konferenčné zborníky: 621

Knihy: 5 kníh a 1331 kapitol

Selekcia časopisov

Selekcia časopisov

Selekcia zborníkov

Minimálne očakávania:

Formálne: uvedené čísla stránok, aktuálnosť, popisné názvy článkov, použitá literatúra, abstrakt a kľúčové slová

Obsah: obohacuje obsah pokrytý vo WOS CC

Konferencie z posledných 4 rokov (pre humanitné odbory neplatí)

Uvedený presný názov konferencie a miesto

Ako doporučím zborník?

Vo forme knihy:

Publication Processing

Clarivate Analytics

1500 Spring Garden Street

Fourth Floor

Philadelphia, PA 19130

USA

Online zborníky (PDF, XML):

tr.pubrelations-proceedings@clarivate.com

Conference proceeding selection essay

Selekcia kníh

Aké knihy akceptujeme do BKCI:

Vedecké knihy vo všetkých odboroch

Monografie aj série

Anglické i neanglické: musia byť v latinke

Minimálne očakávania:

Aktuálna téma vo vedeckom odbore, originálna téma

Kniha vydaná v posledných 5 rokoch

Uvedené inštitúcie všetkých autorov

Uvedená použitá literatúra

Názov knihy a kapitol, abstrakt, kľúčové slová aj v angličtine

Recenzované

Citačná analýza: prioritizujú sa knihy s vyšším vplyvom

Ako doporučím knihu?

Knihy doporučujú vydavateľstvá. Zoznam vydavateľstiev, s

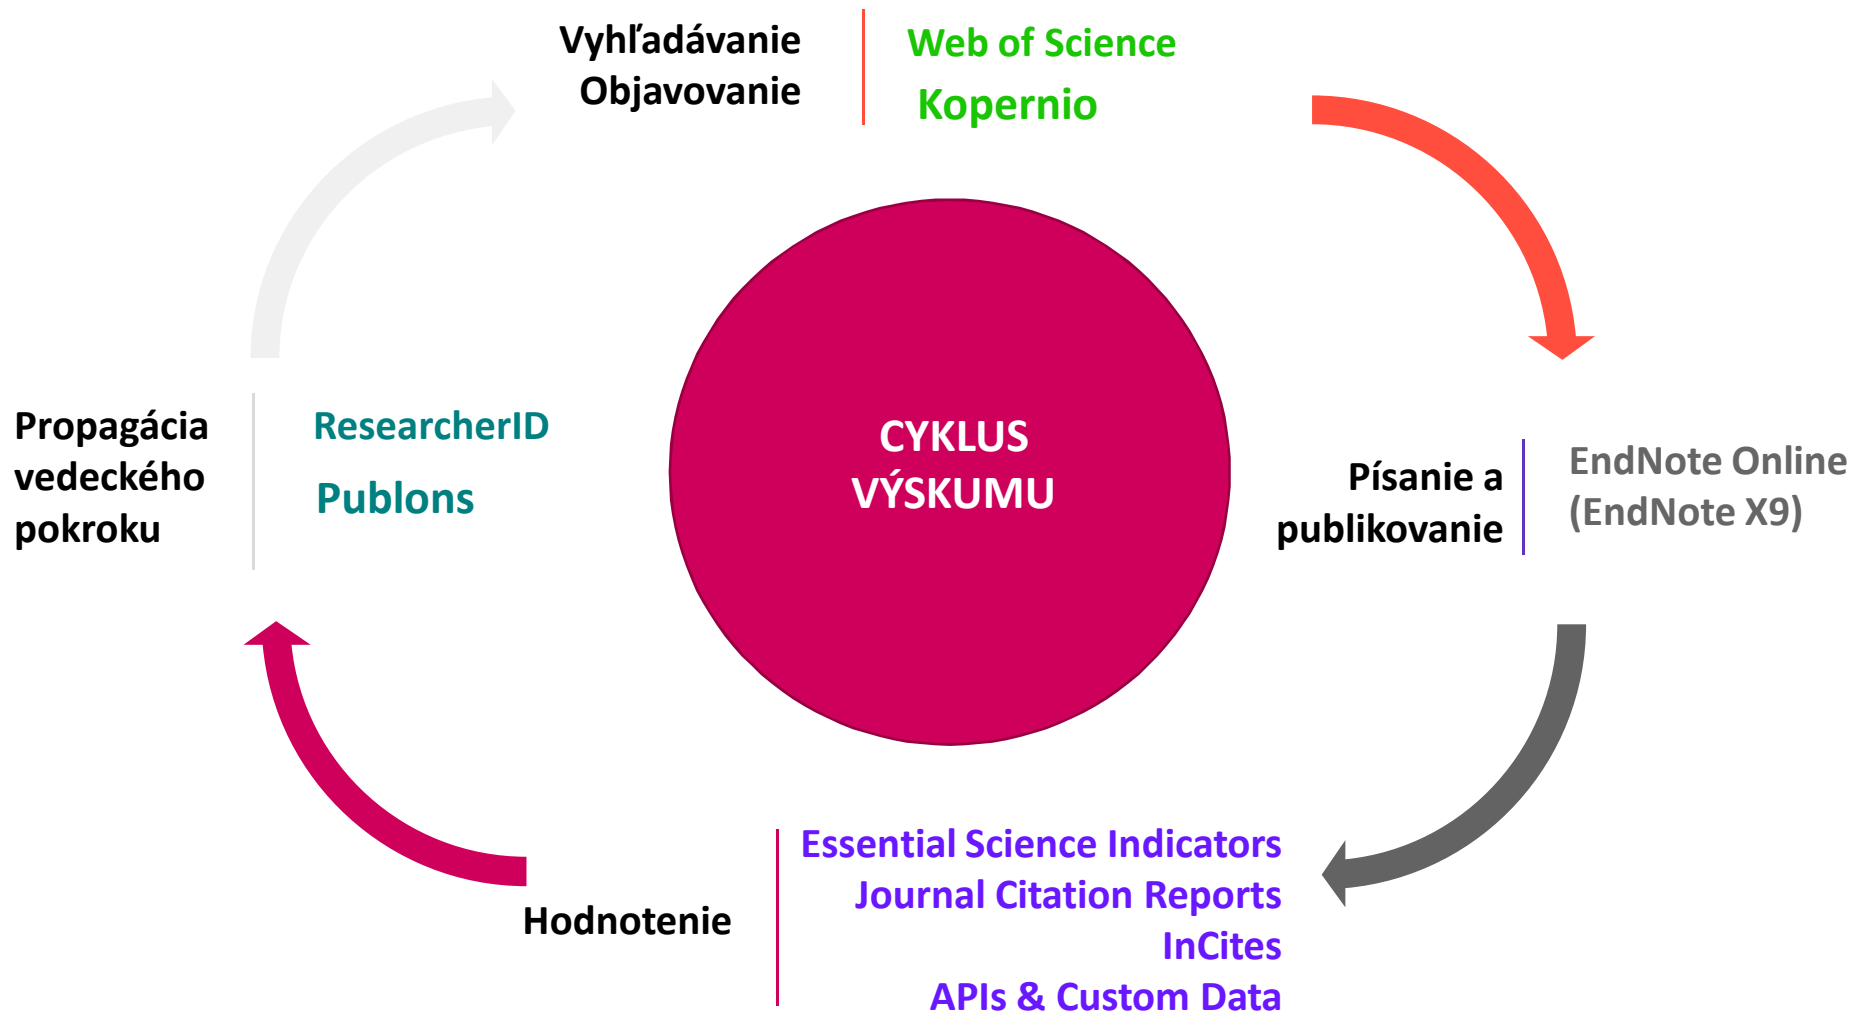

ktorými aktuálne spolupracujeme, nájdete na:

V akých zdrojoch hľadá Kopernio PDF?

Kopernio sa snaží prehľadávať spoľahlivé zdroje vrátane preplatených plnotextových databáz knižnice.

Kopernio je nastavený tak, aby uprednostňoval a vyhľadával plné texty vo Vašich predplatených plnotextových databázach.

- “ Predplatené plnotextové databázy
- “ Open Access obsah
- “ repozitáre (napr. Inštitucionálne repozitáre)
- “ databázy (napr. JSTOR)
- “ pre-print servery (napr. Arxiv)
- “ Google Scholar
- “ Váš Kopernio locker

Čo je najlepšia verzia PDF?

Ak je možné, Kopernio ukáže **finálnu publikovanú verziu článku**.

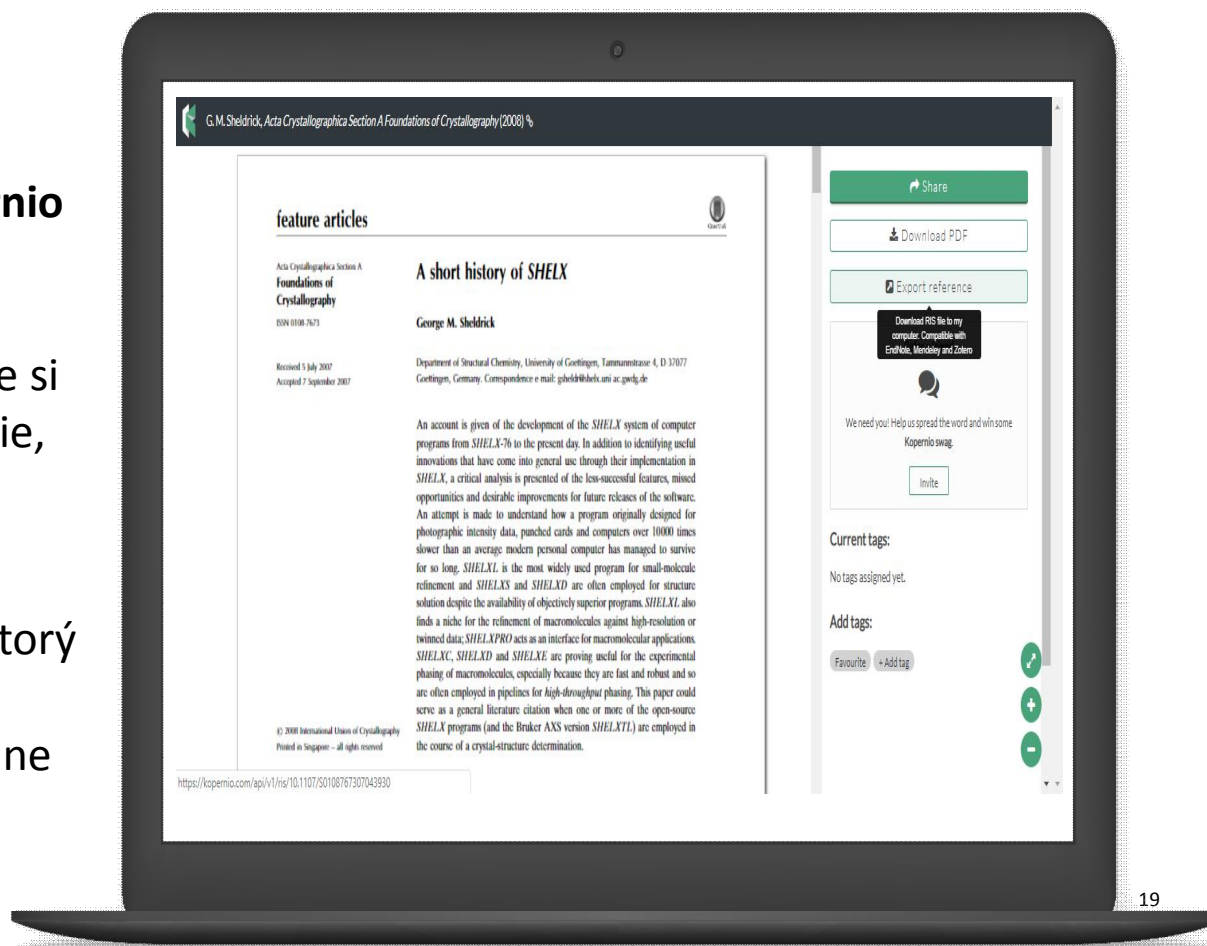

V prípade článkov z predplatených časopisov, ktoré nie sú dostupné v predplatených plnotextových databázach Vašej inštitúcie, Kopernio sa snaží nájsť alternatívnu verziu, ako alebo autorov rukopis uložený v inštitucionálnom repozitári.

Kam sa uloží PDF?

Plný text sa uloží do svojho **Kopernio Locker**.

Kopernio Locker umožňuje rýchly prístup k plným textom, ktoré sme si uložili, môžeme im pridať kategórie, citovať v základných citačných štandardoch apod.

Kopernio umožňuje .RIS export, ktorý je kompatibilný s väčšinou bibliografických manažerov (vrátane EndNote)

²Institute for Microelectronics Technology, 142432 Chernogolovka, Russia

We describe monocrystalline graphitic films, which are just a few atoms thick but nonetheless stable under ambient conditions, metallic and of remarkably high quality. The films are found to be a two-dimensional semimetal with a tiny overlap between valence and conduction bands and to exhibit a strong ambipolar electric-field effect such that electrons and holes in concentrations up to 10^{13} cm^{-2} and with room-temperature mobilities $\approx 10,000 \text{ cm}^2/\text{Vs}$ can be induced by applying gate voltage.

One-sentence summary: We report a naturally-occurring two-dimensional material – graphene that can be viewed as a gigantic flat fullerene molecule, – describe its electronic properties and demonstrate all-metallic field-effect transistor, which uniquely exhibits ballistic transport at submicron distances even at room temperature.

The ability to control electronic properties of a material by externally applied voltage is at the heart of modern electronics. In many cases, it is the so-called electric field effect that allows one to vary the carrier concentration in a semiconductor device and, consequently, change an electric current through it. As the semiconductor industry is nearing the limits of performance improvements for the current technologies dominated by silicon, there is a constant search for new, non-traditional materials whose properties can be controlled by the electric field. The most notable examples of such materials developed recently are organic conductors [1] and carbon nanotubes [2]. It has long been particularly tempting to extend the use of the field effect to metals (e.g., to develop all-metallic transistors that could be scaled down to much smaller sizes and also have the potential to consume less energy and operate at higher frequencies than traditional semiconducting devices [3]). However, this would require atomically thin metal films because the electric field is screened at extremely short distances ($< 1 \text{ nm}$) and bulk carrier concentrations in metals are large compared to the surface charge that can be induced by the field effect. Films so thin are thermodynamically unstable and become discontinuous already at thicknesses of many nm; so far, this has proved to be an insurmountable obstacle to metallic electronics and no metal or semimetal has been shown to exhibit any

Hallmarks of cancer: the next generation.

Hanahan D¹, Weinberg RA.

⊕ Author information

Abstract

The hallmarks of cancer comprise six biological capabilities acquired during the multistep development of human tumors. The hallmarks constitute an organizing principle for rationalizing the complexities of neoplastic disease. They include sustaining proliferative signaling, evading growth suppressors, resisting cell death, enabling replicative immortality, inducing angiogenesis, and activating invasion and metastasis. Underlying these hallmarks are genome instability, which generates the genetic diversity that expedites their acquisition, and inflammation, which fosters multiple hallmark functions. Conceptual progress in the last decade has added two emerging hallmarks of potential generality to this list-reprogramming of energy metabolism and evading immune destruction. In addition to cancer cells, tumors exhibit another dimension of complexity: they contain a repertoire of recruited, ostensibly normal cells that contribute to the acquisition of hallmark traits by creating the "tumor microenvironment." Recognition of the widespread applicability of these concepts will increasingly facilitate the development of new means to treat human cancer.

Bibliometrické analýzy pomocou InCites

Aké sú naše súčasné výsledky?

Aké sú naše výsledky v porovnaní s ostatnými inštitúciami v krajine, regióne?

Ktoré časopisy podporujú našu vizibilitu?

Do akej miery je naše open access publikovanie úspešné?

Aký vplyv má medzinárodná spolupráca?

Ktoré sú najúspešnejšie inštitúcie v mojom odbore?

Ktoré sú naše silné stránky?

Aké grantové možnosti sú v mojom odbore?

Hlavná stránka platformy InCites

The screenshot displays the InCites platform interface. At the top, a navigation bar includes links for 'Web of Science', 'InCites', 'Journal Citation Reports', 'Essential Science Indicators', 'EndNote', and 'Publons'. The user is logged in as 'obchod1@suwe...' and the interface is in English. The main header features the 'InCites' logo with the tagline 'Calibrate Your Strategic Research Vision' and the 'Clarivate Analytics' logo. Below the header, a navigation menu highlights 'Analytics' and includes 'Dashboard' and 'My Organization' options. A 'New in InCites' notification and a 'My Folders' button are also present.

The central section is titled 'Explore InCites Data' and includes the instruction 'Create dynamic tables and graphs based on your needs.' It features six data exploration categories, each with an icon and a label:

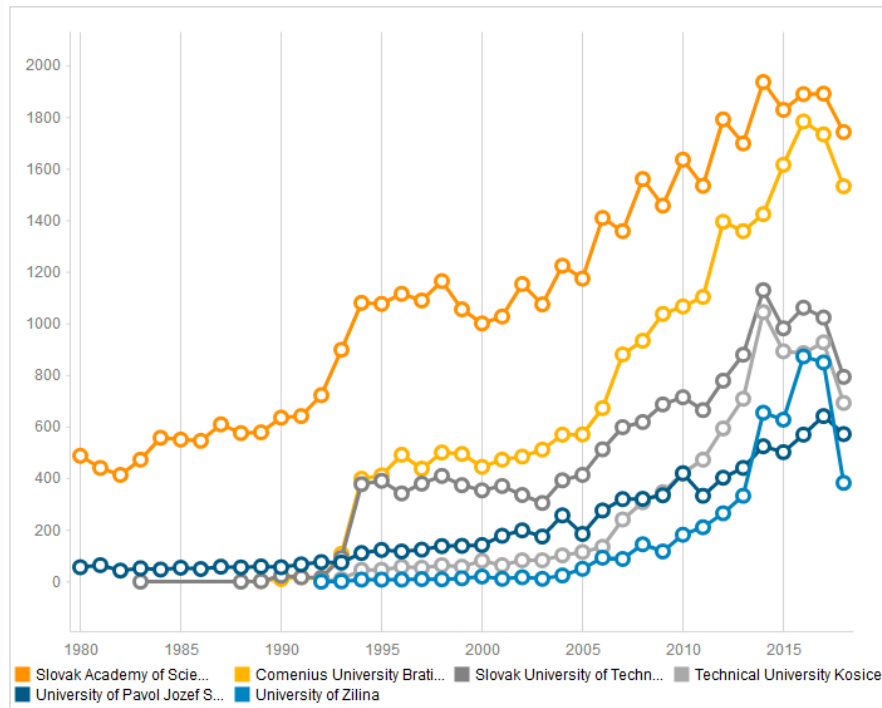

- People (person icon)
- Organizations (building icon)
- Regions (globe icon)
- Research Areas (lightbulb icon)
- Journals, Books, Conference Proceedings (document icon)
- Funding Agencies (money icon)

The bottom section is titled 'InCites System Reports' and displays four report cards, each with a 'Run' button and a 'Learn More' link:

- Researcher Report
- Local Journal Utilization Report
- Research Performance
- Collaborations
